

Vault - Beginner Reverse Engineering

Description

Run the provided binary and answer five onboarding questions by reversing the executable.

Tools

strings, rizin/Ghidra, objdump

Solution

Question 1: Run `strings ./vault` to recover the plaintext password.

Answer: `Pl4nt3xt_p455w0rd_1s_bu551ng`

Question 2: In `main()`, the program compares the stapler count against the decimal value 4079.

Question 3: The asset tag is compared against hexadecimal 0x2a.

Question 4: The code compares the input with ASCII value 0x42, corresponding to the letter 'B'.

Question 5: The input is doubled before comparison. The doubled value must equal 0x5dc (1500), so the required input is 750.

Answers

Q1: `Pl4nt3xt_p455w0rd_1s_bu551ng`

Q2: 4079

Q3: 0x2a

Q4: B

Q5: 750
